A creative dance factory for world class ballet in London.

The new 93,000 sf centre for dance for the English National Ballet provides studio, costume, medical and production facilities for the company. The project features seven full-sized rehearsal studios, dedicated learning spaces, as well as English National Ballet School which is on the top two floors and includes offices for over 200 staff. The main production studio features a stage with a five-storey, 25m tall fly tower

Idibri provided initial concepts and acoustic design for the fit out through schematic design, including close involvement in setting the criteria for the natural frequency of the architecturally-exposed building structure so that it could provide adequate sound isolation between vertically-stacked dance studios.
